CargoWise Global Rollouts Advisory Service

What is CargoWise Global Rollouts Advisory Service?

Calsoft's Outbound Controller empowers freight forwarders and global logistics providers by overcoming CargoWise's one-destination limitation. With Outbound Controller, outbound files and data are seamlessly delivered from CargoWise to multiple systems and destinations, streamlining operations and ensuring smooth integration across the supply chain. This powerful solution enhances efficiency, reduces manual intervention, and provides the connectivity required for today's global transport and logistics networks.

Benefits

- **Global Standardization** – Consistent CargoWise settings and best practices across all regions.
- **Efficiency & ROI** – Streamlined processes that reduce manual work, cut costs, and maximize return.
- **Compliance Confidence** – Simplified navigation of complex global standards and regulations.
- **Tailored Rollouts** – Phased, flexible implementation aligned with both global and local needs.
- **Knowledge Transfer** – Comprehensive training and best-practice documentation for lasting adoption.
- **Risk Reduction** – Proven methodology and global templates minimize rollout and operational risks.
- **Sustainable Success** – Smooth transition from go-live to support, ensuring long-term performance.

Calsoft: A Globally Trusted Solutions Partner

With offices in the US, Japan, China, Malaysia, UK, Mexico, and beyond, Calsoft combines deep product knowledge and international experience to support smoother operations worldwide. Our global presence and proven expertise in international logistics enable companies to achieve sustainable growth.

Global Rollout Consulting Service Overview

Our consulting service is designed to support seamless global system implementations, ensuring alignment across regions while maintaining local adaptability. The following components define our comprehensive approach:

1. Global Environment Management

Establish and maintain a unified operational environment across all regions, ensuring consistency in system behavior, performance, and compliance.

2. Global Rules Consulting

Provide expert guidance on defining, implementing, and maintaining global business rules that govern operations, data structures and flows, and compliance standards.

3. Global Rollouts Planning & Strategy Support

Develop tailored rollout strategies that align with organizational goals, regional readiness, and system capabilities. Includes phased deployment planning, risk mitigation, and stakeholder alignment.

4. CargoWise Global Settings Best Practices

Deliver documentation and advisory on optimal configurations for CargoWise global settings, ensuring scalability, performance, and compliance.

5. Global & Local Project Management

Coordinate and manage both global and local project streams, ensuring timely delivery, resource alignment, and cross-functional collaboration.

6. Local Partner & Partnership Management

Support local partner engagement through:

- Global rules education
- Rule and compliance management
- Project oversight
- Billing and contract administration

7. Global Template Creation Support

Assist in designing and deploying standardized templates for operational processes, documents, training manuals, data migration template, and workflows to ensure consistency and efficiency.

8. Global Master Data Management

Manage foundational data assets including:

- Global chart of accounts
- Organizational structures
- Charge codes and classifications etc...
